

Healthier birds that hunt, fly and breed better

Improve flying performance

- ✓ Improve vitality, fitness, energy levels and flying performance.
- ✓ Higher flying weights (with no loss of performance)
- ✓ Waterproof feathers for safer rainy-day flying
- ✓ Speed moults to get them back to agile flying
- ✓ Reduce the likelihood of illness

You can get all this with Raptor Essentials™!

Our top quality vitamin and mineral supplement for daily use, typically fed by dabbing onto the bare breast of day old chicks.

The day-old chick, the traditional mainstay of captive owls and raptors, is nothing more than an exhausted egg, deficient in calcium, vitamins, minerals and limiting amino acids. Birds that are fed primarily on day-old chicks understandably perform poorly.

But I feed quail, rabbits and other much better food I hear you say! Adult quail are fully grown and are supposedly healthy. But the nutritional value of the quail depends on the quality of food the quail was fed on. For competitive pricing a standard poultry feed is probably used - good enough for them to survive but by no means a perfect diet. If this food is deficient in vitamins and minerals, the birds you feed them to will suffer as well.

Using Raptor Essentials™ on a daily basis will solve these issues and more!

Improve breeding results

- ✓ Bring adults readily into breeding condition
- ✓ Increase fertility and reduce dead-in-shell
- ✓ Reduce egg-binding and misformed eggshells
- ✓ Produce more live chicks
- ✓ Reduce broken bones and rickets
- ✓ Produce strongly growing chicks

For great breeding results you want Raptor Breeder Essentials™!

It's Raptor Essentials™ for its health and well-being benefits **plus** a great package of extras to amaze you with the breeding results.

The extras include higher levels of vitamin E, plus our organic mineral complex hen fertility booster, plus some herbal ingredients that also promote better fertility, better breeding condition, better health and better chick growth and development.

Many people report substantial improvements in breeding performance with this product - from the smallest of private breeders right up to the largest birdpark in the world at Walsrode in Germany.

*Although you might be able to provide a reasonable diet without supplementation, **using the Raptor Essentials™ range is a lot easier, a lot cheaper and a lot more certain of getting results.***

The secret to helping sick raptors quickly!

- ✓ **Very easy to use**
- ✓ **Very effective**
- ✓ **Unique product**
- ✓ **Supports immune system**

Your bird or dog gets sick. What do you do? Stress it more with a trip to the vet? Vet visits are always recommended if your animal's life is in danger but supporting the immune system works wonders.

Guardian Angel™ contains exciting new ingredients which, when combined, we call our 'white cell support system'. These are then blended with a number of our other leading edge products to provide the most comprehensive support we can for sick birds.

White cell support

The white blood cells are the immune system's killer cells. I like to think of them as a 'Rapid Reaction Force'. When a bird picks up an infection it produces vast quantities of white cells to circulate in the blood and attack invaders. It is these cells that give puss its distinctive colour.

Like any manufacturing process the production of white cells in the body can easily be limited by a shortage of raw materials. So our white cell support system provides the nutrients that are often in short supply at times of crisis.

But the production of white cells is only part of the story. White cells use lots of energy from fats to function efficiently. And fats need to be transported into the mitochondria (the cell's engine rooms). At periods of peak demand the nutrients required for this fat delivery can also run short. So **Guardian Angel™** contains extra ingredients to help with this process.

Amazing results with Guardian Angel™!

- ✓ **White cell support**
- ✓ **Special energy for cells**
- ✓ **Electrolytes to hydrate**
- ✓ **Vitamins for repair**
- ✓ **Rapisorb minerals**
- ✓ **Anti-microbial action**
- ✓ **Beneficial bacteria**

Easier to use

Because this product contains so many ingredients it is far easier to use than trying to combine a number of other products.

For birds of prey we recommend **Guardian Angel™** is added to the food. For your dogs it can also be added to foods or the drinking water.

Guardian Angel™ highlights **The Birdcare Company's** dedication to finding and providing you with the most advanced ingredients to help you with your sport.

Bird of Prey Hygiene

Raptors and owls are vulnerable to infections from their food, their water and their blocks, perches and aviaries. **The Birdcare Company** has two proven and powerful products to help maintain health and hygiene in these situations.

Water containers

Water containers, especially in hot weather, can easily become contaminated and grow a whole host of germs and algae. Often these are invisible. When birds return from hunting it is not uncommon for them to have small wounds on their legs which easily get infected when the bird bathes.

The simple way to prevent this happening is to use very small amounts of **Avidlens™** (**Saniclens™** outside Europe) in the water. This is powerful enough to prevent germ growth but is easily overwhelmed in the gut so causes no ill effects when the bird drinks it. It is added at just 0.5 mls per litre of water.

Perches and aviaries

Other sources of infection are all around the birds' environment – especially in areas where the bird is eating. There are a number of factors that falconers need to consider when selecting a disinfectant:

- Does it kill a broad range of germs – bacteria, fungi and viruses?
- Is it safe to use around the birds?
- Is it corrosive?
- Is it cost effective?
- Can it also clean?
- Is it safe to dispose of in the environment?
- Is it approved by a suitably competent body?

Avisafe

Avisafe™ (**Enviroclens™** outside Europe) is a very broad spectrum disinfectant killing bacteria, fungi and viruses effectively in a short time frame.

It is very safe to use around birds and for the operator. In fact it can be left to dry and does not need to be rinsed off before it is safe for the birds.

Avisafe™ is not corrosive to metal objects in the aviary or the falconry furniture and does not stain either.

Unlike most disinfectants **Avisafe™** remains active for months after diluting with water. The most economical way to use it is to mix it in a spray bottle, spray it onto the object to be disinfected and leave it. The amount used and the amount wasted is very small making it incredibly good value. Alternatively mix 25 litre drums and use this over a period of time.

Avisafe™ also contains powerful detergents so is great at cleaning and disinfecting in one go. In the environment it is very biodegradable. In fact it is in the least environmentally toxic category on the **DEFRA** listing.

Avisafe is approved by the Department for Environment, Food and Rural Affairs (UK).

Product List

Raptor Essentials: Vitamins, minerals (inc calcium) and amino acids for flying, moulting and resting birds of prey. The most efficient moulting supplement we can make.

Raptor Breeder Essentials: Vitamins, minerals (inc calcium), fertility enhancers and herbal health promoters for breeding birds of prey and their youngsters.

Calcivet: The most concentrated and bio-available calcium supplement on the market. Increases clutch sizes, hen health and bone development, while reducing egg binding in hens. For flying performance it improves co-ordination and agility.

Calcivet on Food Powder:

Powdered version for easy addition to food. Twice the strength of liquid Calcivet.

Potent Brew: Powerful liquid probiotic for maximum gut health. Ideal breeder stimulant and chick health promoter. (4 - 6 month shelf life).

BioPlus: Powdered probiotic with prebiotic. Not as powerful as Potent Brew but 2 year shelf life.

Guardian Angel: The ultimate sick bird support. Immune support, vitamins, electrolytes, probiotics and long term energy. Fight infections before they start!

Spark: First Aid for exhausted and stressed birds. Preparation for stress.

Poly-Aid: Emergency food for starving birds. For crop tube feeding. Crop tubes also available.

Blast-Off: Dusting powder for lice and mites including flat fly. For use on the bird.

Birdy Finect: Unique natural formula to kill mites and mite eggs in cages and around perches.

Wheeze-Eeze: Supplement for respiratory infections.

Aviclens: Stops germs and algae growing in water containers. Helps prevent wounds becoming

infected with pseudomonas.

Avisafe (concentrate):

Cleaner/disinfectant that kills yeasts, fungi, viruses and bacteria. Use to keep shelves and perches clean and prevent disease problems.
